## WHAT IS A CENTRAL VACUUM SYSTEM?

The central vacuum system comprises a set of vacuum inlet valves, strategically located throughout the home linked by means of a network of **PVC** ducting to a central vacuum unit, which is normally located in the **garage** or **utility room** of a house or on the **balcony** of a flat, **etc...**

The **advantages** of SACH over a conventional vacuum cleaner

**IT'S EASY TO USE:** Simply connect the hose to the vacuum inlet valve and it's ready to use.

**IT'S QUIET:** Because the relatively quiet central vacuum unit is located away from the main living areas you don't experience the same noise disruption you would with a conventional vacuum unit.

**IT'S HYGIENIC:** It removes dust particles and germs circulating in the air directing them via a network of ducting to the central vacuum unit.

**IT'S AN INVESTMENT FOR THE FUTURE:** A central vacuum system is a practical viable investment offering a considerable improvement to your daily life as well as differentiating your home from others on the market and making it more attractive to potential buyers.

# Vac Dynamic Vac Digital

**Dynamic:** Quiet, effective and available in three different versions, **1.6, 1.8 and 2.4** according to the power needed to clean your size of home, **Dynamic** is the central vacuum unit to suit all types of domestic central vacuum installation.

**Digital:** A high-end central vacuum unit also available in **1.6, 1.8 and 2.4** versions, Digital incorporates advance electronics in the form of a digital display panel which provides up-to-the-minute information on the performance and condition of your central vacuum unit.
